

# Feature List

## Java

- Built with Java, the industry standard for enterprise applications.
- Conform to the [Java Servlet 2.3 specification](#) (final release).

## Open Source

- Open source software distributed under the OpenSymphony Software License (derived and fully compatible with the [Apache Software License](#)).

## Simple

- Non-technical users can now create professional Web pages while effortlessly maintaining a consistent look-and-feel across your web-application.
- Dramatically reduces the time needed to develop and maintain a web-application.
- Eliminates the need to create multiple web-apps for different audiences by allowing the decorator to be changed according to the useragent or a request parameter(s) (e.g. printable version).

## Very flexible

- A printable version of your entire site is only a matter of minutes!
- Map a decorator based on a cookie value.
- With the [RobotDecoratorMapper](#) you can apply a special decorator to all your pages when they are indexed by a search engine robot (also known as spider, crawler). Currently supports over 200 robots.

## Integrated

- Supports [Velocity](#) and [Freemarker](#) for writing decorators.
- Supports other technologies (CGI, Perl, MS ASP... anything that renders html).
